# SUSE Manager 3 - Patch Management
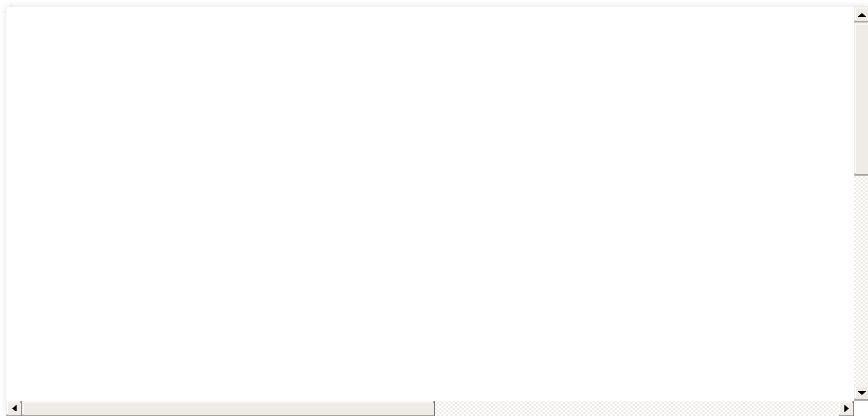

Agenda

- Patch Day
- Emergency Patches

Patch Day

The common workflow is to merge one channel with another one. So you have to merge the vendor channels with your test channels, to upgrade the software packages on your SLES test systems.

If all tests on your SLES test systems passed successfully,

you can go ahead and merge the test channels with the production channel, and upgrade your SLES production systems.

Patch Day - Development

Patch Day - Production

Emergency Patches

If you're unable to merge complete channels or if you just want to push an explicit patch to your SLES test and production systems.
